Live Event Dashboard

ANTANO & HARINI · UI/UX DESIGNER

ROLE UI/UX Designer

FOCUS Event dashboard

TOOLS Figma

A single operational surface for running multi-day transformation events: 412 participants, seven days, six teams, and every number one click away from the people behind it.

[View on Behance](#)

01 - CONTEXT

Seven days, six teams, one shared truth

STARLABS runs multi-day live transformation events. During an event, six different teams need answers at the same time: who showed up today, who is validated to take part, which procedures are still running, who never turned up at all, and which participants have unresolved support tickets.

Before this dashboard, those answers lived in five spreadsheets, a WhatsApp thread, and one person's head. My job was to collapse them into a surface an operator can read in ten seconds and act on in one click.

A&H MOBILE CRM • CASE STUDY • 2026

Running a 755-person live event *from one thumb.*

A&H CRM is a floor-level command center for coaches and event admins. It replaces spreadsheet lookups and WhatsApp scrambles with one searchable roster — every participant's journey stage, products, tags and last note reachable in under three taps, mid-conversation, while standing in a hall of 755 people.

ROLE
Product Designer
(UI · UX)TIMELINE
3 weeks
2026TEAM
Solo designer with AI

Research, IA, UI,
interactive prototype

01 — THE PROBLEM

The data existed. It just wasn't reachable while standing up.

Participant records lived in a desktop admin panel built for back-office work — dense tables, nested filters, ten-second page loads. On the event floor none of that survives contact with reality. Coaches had 40 seconds between conversations and a phone in one hand.

So they stopped using it. Notes went into personal notebooks, flags went into WhatsApp groups, and by Day 3 nobody could answer the only question that mattered: *who needs attention right now, and why?*

• PRODUCT DESIGN CASE STUDY

Dynamic Studio

A real-time 1-on-1 session workspace that keeps a specialist on desktop and a participant on mobile perfectly in step – from the moment they check in to the moment the session resolves.

ROLE

Product Designer – UX, UI, prototype

PLATFORMS

Desktop web (specialist) · iOS & Android (participant)

SCOPE

19 screens · 2 surfaces · 1 state machine

DELIVERABLE

Interactive high-fidelity prototype

01

OVERVIEW

A live session used to live in three places at once

Specialists run one-on-one growth sessions with participants: reviewing forms, running a call, prescribing a practice, validating scores, and deciding where the person goes next. Before Dynamic Studio, that ran across a scheduling tool, a video link, and a records back-office – with the participant on their phone guessing whether anything was happening at all.

Dynamic Studio collapses that into a single live room. The specialist drives; the participant's phone mirrors the same state, step by step, in real time.

19

screens specified and built end to end

2

surfaces driven by one shared state machine

5

wizard steps, variable by activity type

0

dead ends – every state has an exit

02

THE PROBLEM

Two people in the same session, two different realities

The specialist knew what was happening. The participant did not. Every gap in that asymmetry turned into a support message, a no-show, or a session that had to be run twice.

1

Invisible queue

Participants had no idea whether a specialist was online, how long the wait was, or whether they had been forgotten.

2

Fragile handoff

An invite was a link in a message. If it was missed, expired, or declined, the specialist sat idle with no way to recover the slot.

3

Unowned outcome

Notes, prescriptions and scores were written after the fact, in a different tool, often days later – or not at all.

Breakthroughs

ANTANO & HARINI · UI/UX DESIGNER

ROLE	UI/UX Designer
FOCUS	Participant app · IA · E-ticketing
TOOLS	Figma · Sketch

A participant-facing transformation app I rebuilt from a video player into the product the whole programme runs on: surfacing buried content, bringing events into the app, and replacing a manual ticket list with a real e-ticketing system so participants get a clear map instead of a maze.

[View on Behance](#) ➤

At [Antano & Harini](#), we don't just help people succeed — we install the superior capabilities that make impossible success inevitable. Using [Excellence Installation Technology \(EIT\)](#), we compress 20 years of evolution into 2.

Our flagship programs — [uP!](#), [Launch Your Legacy \(LYL\)](#), and [B!G](#) — aren't informational. They are transformational. And the Breakthroughs App is how our participants track, accelerate, and live that transformation.
